SUMMARY

Recently completed my academic session in BSC(Hons) Computer Science from Herald College Kathmandu, I am keenly enthusiast in mobile application development. I did my final year project in flutter which was a B2B e-commerce mobile application. Similarly, I have done some other projects using flutter both with and without the backend. Besides, I have done projects using Django and Laravel. Also, I did some academic group projects and was a community member in the UI/UX community of our college, so working with a team will not be a problem.

ACHIEVEMENTS

Finalist of the DEVFEST 2021

This was the annual community challenge where communities had to conduct different projects. I took active participation in that challenge. We conducted a photograph session, pro tips session, and front-end workshop.

SKILLS

- Flutter, Dart - Skillful
- Django framework - Skillful
- PHP/Laravel - Beginner
- Git / Github - Skillful
- Figma - Skillful
- Designing - Canva - Skillful

EDUCATION

Bachelor in Computer Science

Herald College Kathmandu / Kathmandu / November, 2019 - July, 2022

+2 Education

Uniglobe College / Kathmandu / August, 2016 - August, 2018

Schooling

Swarnim School / Kathmandu / May, 2011 - April, 2016

PROJECTS

B2B Ecommerce Mobile Application

I developed a full-stack B2B e-commerce mobile application as my final year project. I used the flutter framework as the frontend and Django as the backend. Similarly, I used the provider as a state management tool in this project. Different plugins were also used. There was the use of API in this project. I am still working on this project for its betterment.

Blood Donation Application

I tried to create a demo blood donation application using flutter. This application had to push and fetch data from the Django server using rest API.

Demo Mobile App of existing License WebApplication

This was our group project where I was an active developer. I developed the front-end part of the application.
